

**1. Set your username and email in git config**

```
git config --global user.name "KALLURINAVEENKUMAR"  
git config --global user.email "naveen.kalluri@practo.com"
```

**2. Create a new branch named "feature-branch" and switch to it.**

```
git branch feature-branch  
git checkout feature-branch
```

**3. List all branches in the repository.**

```
git branch -a
```

**4. Delete the branch "feature-branch"**

```
git branch -d feature-branch
```

**5. How do you undo the last commit**

```
git revert HEAD
```

**6. Create a new branch names "conflict-branch"**

```
git branch conflict-branch
```

**7. Create a another branch named "feature1"**

```
git branch feature1
```

**8. Make some changes in to feature1 branch**

```
git switch -c feature1
```

**9. Merge "feature1" branch into main branch**

```
git checkout main
```

```
git merge feature1
```

**10. Make changes in "conflict-branch", in the same file and line that you had made changes in feature1**

```
git checkout conflict-branch
```

```
git switch conflict-branch
```

```
git add example.txt
```

git commit -m "Made conflicting changes in conflict-branch"

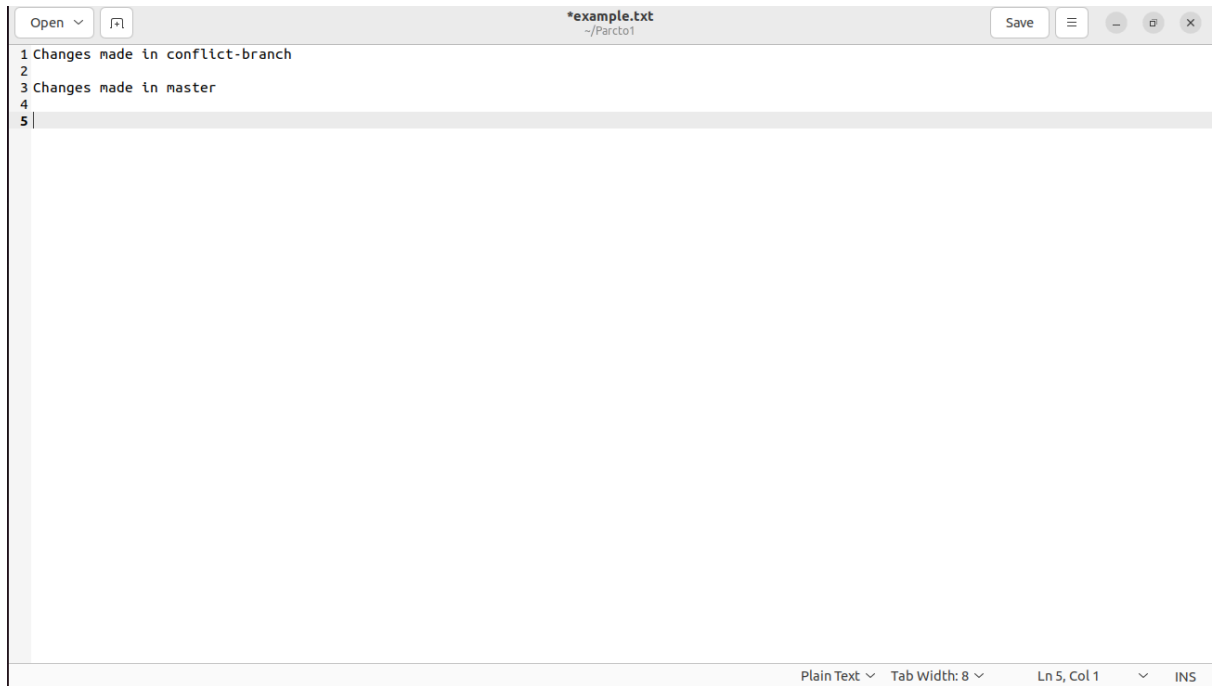

git checkout main

git merge conflict-branch

#### 11. Merge master into conflict-branch [Attach screenshot of terminal & file]

```
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~$ cd Parcto1
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~/Parcto1$ git checkout -b conflict-branch
Switched to a new branch 'conflict-branch'
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~/Parcto1$ git branch
* conflict-branch
  master
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~/Parcto1$ echo "Changes made in conflict-branch" >> example.txt
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~/Parcto1$ git add example.txt
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~/Parcto1$ git commit -m "Made changes in conflict-branch"
[conflict-branch 37a407b] Made changes in conflict-branch
 1 file changed, 1 insertion(+)
 create mode 100644 example.txt
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~/Parcto1$ git checkout master
Switched to branch 'master'
Your branch is up to date with 'origin/master'.
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~/Parcto1$ echo "Changes made in master" >> example.txt
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~/Parcto1$ git add example.txt
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~/Parcto1$ git commit -m "Made conflicting changes in master"
[master 9bd03cd] Made conflicting changes in master
 1 file changed, 1 insertion(+)
 create mode 100644 example.txt
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~/Parcto1$ git checkout conflict-branch
Switched to branch 'conflict-branch'
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~/Parcto1$ git merge master
Auto-merging example.txt
CONFLICT (add/add): Merge conflict in example.txt
Automatic merge failed; fix conflicts and then commit the result.
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~/Parcto1$ git add example.txt
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~/Parcto1$ git commit
[conflict-branch dba8c4c] Merge branch 'master' into conflict-branch
kalluri@kalluri-HP-ProBook-440-G8-Notebook-PC:~/Parcto1$
```

Example.txt

## 12. Resolve merge conflicts

First I will use git status to see the status of my repo and next to resolve the conflicts which I faced for the above one , where git inserts conflict markers , I will remove those markers.

For example:

For above question i got this first

```
<<<<<< HEAD
Changes made in conflict-branch
=====
Changes made in master
>>>>>> master
```

Then i removed those conflict markes ( <<<<<< , ===== , >>>>>> )

Issue Solved.

## 13. Add a remote named "origin" pointing to a GitHub repository.

```
git remote add origin https://github.com/your-username/your-repository.git
```

**14. Fork a repository on GitHub and clone it to your local machine.**

**Add another repo and adding into existing repo , by this existing code will not get disturbed for that ,**

```
git remote add upstream https://github.com/anotherrepo/anotherrepo.git  
git fetch upstream  
git merge upstream/main
```

**15. Create a new branch on your fork, make changes, and open a pull request to the original repository.**

```
git clone https://github.com/KALLURINAVEENKUMAR/practo2  
  
cd practo2  
  
git checkout -b newbranch  
  
vim file.txt ( "first content" )  
  
git add file.txt  
  
git commit -m "Updated content"
```

**16. Comment on a PR and suggest improvements**

Great work on this PR! The new feature adds valuable functionality. However, I noticed a potential performance bottleneck in the addition( ) function. Consider optimizing it for better scalability.

**17. Create a Git alias for the command `git log --oneline` named `gitlol`.**

```
[alias]  
gitlol = log --oneline
```

**18. Create a pre-commit hook**

In the hooks directory in our repo we can create a Pre-Commit Hook and can add our desired commands . when each commit runs the script or commands written in the Pre-Commit hook automatically runs.

**19. you have made local changes in your branch, but you need to switch to another branch urgently without committing. How would you handle this situation?**

I can create another branch using

git checkout other-branch

**20. You accidentally deleted a file in your local repository. How do you restore it using Git?**

First by checking git log to find the commit where the file was deleted by using

```
git log -- path_to_deleted_file
```

Next i will restore the deleted file using git checkout

**21. You have committed changes to your branch but forgot to include a file. How do you add the file to the last commit without creating a new commit?**

First i will add foregotten file using

```
git add (path of forgotten file)
```

Next i will use -- amend and --no-edit

Because -- amend allows us to modify the last commit and --no-edit allows that the commit message of the last commit remains unchanged.

**22. You want to discard all changes in your working directory and revert to the last commit. What Git command would you use?**

```
git reset --hard HEAD
```

**23. You need to view specific commit changes. What Git command can be used to show the changes introduced by a particular commit?**

```
git show
```

**24. You want to change a commit message, after you have already committed, how do you do so?**

git commit --amend . This allows me to change the most recent commit message in your branch.

**25. Your colleague has made changes in their branch, and you want to incorporate those changes into your branch without merging. How do you achieve this?**

git cherry-pick - By this I can selectively apply changes from your colleague's branch onto your own branch without merging the entire branch history.

**26. You've made several commits on a branch, but you want to club them into a single commit before pushing to the remote repository. How would you do that?**

git rebase -i , This allows me to efficiently combine multiple commits into a single commit before pushing to the remote repository.

**27. You accidentally staged a file that you don't want to commit. How do you unstage it?**

git reset HEAD pathToFile , this allows me to unstage a file that was accidentally added to the staging area.

**28. You don't want to commit files that have .yml in the end, and also files inside folder config. How do you do that?**

In the .gitignore file I will add all .yml files.

**29. You want to see a list of all the files changed in the last commit. What Git command would you use?**

git show --name-only HEAD, This allows me to view list of all the files changed in the last commit.

**30. You realize that your local branch is outdated, and you want to fetch the latest changes from the remote repository. How do you do this without merging?**

git fetch  
git rebase

**31. You accidentally deleted a branch. How do you recover it?**

git reflog - used to find the commit where the branch was deleted

`git checkout -b` - recreate it locally

- 32. You want to remove untracked files and directories from your working directory. What Git command would you use?**

`git clean`

- 33. You have a commit from a feature branch that you want to apply to the main branch without merging the entire feature branch.**

Using **git cherry-pick** we can apply to the main branch without merging the entire feature branch.

- 34. You mistakenly committed a change to the wrong branch and need to apply that commit to the correct branch.**

Using, **git cherry-pick**, we can selectively apply a commit from one branch where it was mistakenly committed.

- 35. There is a series of commits on a feature branch, but you only want to cherry-pick a specific range of commits.**

`git cherry-pick <start-commit>^ ..<end-commit>`

- 36. You want to clone a GitHub repository onto your local machine, but you only need a specific branch. How can you achieve this?**

`git clone -b branch-name URL`

- 37. You've made changes to your local repository and want to push them to your fork on GitHub. What Git commands would you use?**

`git add .`

`git commit -m "commit message"`

`git push origin branch-name`

- 38. You want to create a new branch both locally and on GitHub to work on a new feature. What commands would you use?**

`git checkout -b new-feature-branch`  
`git push -u origin new-feature-branch`

- 39. You want to see the commit history of a GitHub repository. How can you do this using Git commands?**

`git log` is used to see the commit history of a GitHub repository.

- 40. You've accidentally committed sensitive information and want to remove the commit from both your local and remote repositories on GitHub. What commands would you use?**

`git rebase -i HEAD~n` and then delete the commit line and then use this command

`git push --force-with-lease origin branch-name`

- 41. You want to delete a remote branch on GitHub. What Git command would you use?**

`git push origin --delete branch-name`

- 42. Create a git repository for all your assignments and upload them in it. Ask your peers to code review it, and you need to code review your peers assignments**

- 43. Create a pull request on any open source library on github, attach the pull request link to the readme file of this project's repository**
